

# Introduction to the Sex Offender Service: How to search

Ryan Lee Martin – [ryanlmartin@gmail.com](mailto:ryanlmartin@gmail.com) – Version 1.0, 2019-06-14

## Table of Contents

[First Section](#)

[Happy New Year!](#)

[Second Section](#)

## First Section

```
FROM alpine:latest
RUN apk --no-cache add ca-certificates
```

“*Shut the fuck up Donnie!*

— Walter  
*Big Lebowski*

## Happy New Year!

- This is a thing
- This is something else

Table 1. Table Neato

Name of Column 1	Name of Column 2	Name of Column 3 (1) (2)
Cell in column 1, row 1	Cell in column 2, row 1	Cell in column 3, row 1
Cell in column 1, row 2	Cell in column 2, row 2	Cell in column 3, row 2

Content in a passthrough block is passed to the output unprocessed. That means you can include raw HTML, like this embedded Gist:

```
1 # The Greeter class
2 class Greeter
3   def initialize(name)
4     @name = name.capitalize
5   end
6
7   def salute
8     puts "Hello #{@name}!"
9   end
10 end
11
12 # Create a new object
13 g = Greeter.new("world")
14
15 # Output "Hello World!"
16 g.salute
```

greeter.rb hosted with ♥ by GitHub

## Second Section

### Tip List

- item 1

Man with itchy but wake up with smelly finger

An admonition block may contain complex content.

#### *A list*

- one
- two
- three

Another paragraph.

- Item 2 Very nice very nice

### AsciiDoc history

AsciiDoc was first released in Nov 2002 by Stuart Rackham. It was designed from the start to be a shorthand

syntax for producing professional documents like DocBook and LaTeX.

### *Rust is cool*

```
#[derive(Deserialize)]
struct Info {
    username: String,
}

#[derive(Debug, Serialize)]
struct Offender {
    id: u32,
    name: String,
    dateOfBirth: String,
    age: String,
    addresses: serde_json::Value,
    offenses: serde_json::Value,
    aliases: serde_json::Value,
    personalDetails: serde_json::Value,
    photos: serde_json::Value,
}
```

```
let x = 5;
let mut p = &x;
```

```
$ sudo apt install piggy
$ sudo apt update
$ sudo apt upgrade
```
